Graduating Usask CS Fall 2021   https://github.com/Sam-GG

To whom it may concern,

Please consider the following inquiry about employment. As the semester closes, I am focused in finding seasonal work or continued employment into fall and/or after. I am graduating Computer Science from the University of Saskatchewan come December. I have 3 classes left in my degree, indicating potential availability for work hours during my last semester.

My resume mostly details summer jobs in the construction industry. This line of work I was fortunate to grow up doing. It paid bills, and allowed me to secure summer income in a city I didn't grow up in. I wish to work in a field related to my degree as that is where my passion lies, but I believe my time framing, landscaping, roofing etc. has taught me a great deal of transferable skills. These are fast paced work environments that rely on discipline and good communication. I've also had the opportunity to oversee a number of jobs and delegate work amongst my crewmates. I hope to translate some of this experience to the workplace.

I have the technical ability of a passionate Computer Science graduate. Through my studies I took a liking to a number of things, particularly enjoying classes on A.I and machine learning techniques. I've completed optional group work oriented classes such as CMPT 306, 370, and 406 this fall. Languages I've had projects in include C/C++, Python, Java, Scala, C# and Javascript but I'd be lying if said I practice all of these simultaneously. I have no issue picking up new or refining old languages and technologies before date of employment.

I am invested in CS both in and outside of academia. I always have a couple software projects on the go. I've recently picked up a hobby doing a bit of electronics. This being DIY synthesizers using IC's and components, but I've completed a related microcontroller project using C programming. Having these hobbies have bolstered my understanding academically.

This letter is meant to be concise, any questions or follow ups are welcome. My email is listed in the header above, and further contact information can be found in the attached resume.
